Cost

\$7,715,000

Automatic Data Processing (ADP), full-service provider of human resource services which help employers worldwide to staff, manage, pay and retain their employees, hired JM Olson to provide construction management services for the new office building in Dearborn, MI. The two-story, 85,000 sf office serves as one of their data processing and product distribution facilities.

Located on a 5.6 acre site, this steel framed facility with precast panel skin and ribbon windows is adjacent to Ford Motor Company's World Headquarters. The facility houses a 7,500 sf computer room with raised access flooring, employee cafeteria, outdoor patio/seating area, a self-contained back-up generator system and other support areas.
