Joann Brooks, Project Accountant

Delivery Method

General Contracting

The school district of the city of Inkster contracted JM Olson Corporation for various capitol improvements to their high school facility. The work consisted of ceiling upgrades for all corridors within the building as well as installation of new lay in ceiling, lighting, fireproofing anf other miscellaneous repairs. In addition, some minor asbestos was removed from pipe insualtion.

The majority of the work was performed during the school season, which presented unique challenges to the team. JM Olson accomodated each of the owner's needs while working in and around the occupied facility, and not disrupting the end of the year activities for staff and students.
