Dearborn, MI 48126

**Architect**

Various

**Size**

Multiple Buildings

**Cost**

\$5,000,000 to \$10,000,000 annually

The Ford Construction Commodities program (CCM), developed by Ford Purchasing, facilitates consistent and predictable construction results. The JM Olson Corporation is the sole construction services provider to 22-major facilities throughout the Ford Research and Engineering Center. Our team is charged with programming, development, engineering, estimating and construction of 50+ projects a year under this program. The majority of these projects are constructed in operating occupied facilities.

The CCM Program was put in place to reduce overall construction costs. Other benefits include: increased familiarity with the building and contractor, strengthened relationships with the building facilities personnel and a single point of contact for projects. Reduction of mobilization / demobilization costs and assistance in planning work with UAW trades also benefit from this unique partnership.
