Size

56,000 sf, 1-story

Cost

\$3,885,000

Date Completed

1989

JM Olson provided design/build services for this new one-story, 56,000 office building for Ford Aerospace. Specialized elements of the building included the heating and cooling systems and power sources. 30,000 sf of the building houses highly sophisticated computers and communication technology. Specialized systems were important because after the building was completed, the Owner requested Olson to construct a truck well addition for the facility.

“JM Olson Corporation brings all the necessary qualifications to this project and has consistently exhibited exemplary performance in meeting critical and compressed schedule requirements of past projects, completing them on time as well as at or below budget.”

Gordon Cooley, Ron Gagnon, Tom Cote
