**Size**

6,000 sf

**Cost**

\$1,000,000

General Motors retained the exceptional service of JM Olson to provide design/build for a new two-story traffic safety tower. The 6,000 sf tower is located at the 5,000 acre General Motors Corporation Proving Grounds.

This masonry block tower - considered the central control point for the secluded 66 acre vehicle dynamic test area - houses a sloped-glass curtain wall observation deck, office areas, a three-vehicle garage, vehicle drive-thru area and support facilities.

Special equipment installed by the Olson Design/Build Team included radio control systems, air compression stations and carbon monoxide ventilation systems.
