Cost

\$2,941,000

JM Olson Corporation provided construction management services for a Homewood Suites project. The unique mini-suite accommodation complex was developed by the Hotel Services Division of Holiday Inns, Inc. and incorporated numerous hospitality components.

The project consisted of three buildings for a total of 55,000 square feet. The guest suite units were constructed as one three-story suite building and another two-story building. Each guest unit contains a living room with fireplace, a bedroom and kitchen. A central lodge structure was designed and constructed to contain a lounge area and weight room with recreational amenities such as a swimming pool and sports court outside.
