Size

37,000 sf

Cost

\$2,000,000

JM Olson provided construction services for a new one-story, 37,000 sf steel framed furniture store. This Georgian style is accented with limestone keystones and sills and brick corbelling. The main entrance is set off with four columns measuring 24 feet in height and 30" in diameter.

A variety of quality materials were used inside the store to set the tone of the facility. A barrel vaulted ceiling with intricate wood dental work, cornices and trim, accents the lavish marble thoroughfares. Nearly three dozen designer galleries are carefully integrated to present the prospective furniture buyer with the ultimate showroom experience.

A low project site necessitated extensive pre-construction preparation including an eight foot build up of engineered fill. To meet the critical opening date, the majority of the building was constructed through the winter months with requisite temporary heating installation and plastic wall enclosures.
